

General Project Information

Natorium Component Replacements

Project: Natatorium component replacements

Project Description: Replacement of the interior natatorium lighting fixtures at the identified campuses, replacement of the pool plaster and flooring at KHS, and the replacement of the pool starting blocks at the identified campuses.

Campuses identified for interior light replacement: CRHS, SLHS, and MRHS.

Campuses identified for starting block replacements: KHS, CRHS, MRHS, and SLHS.

Project Priority: 1

Background & Justification: The interior lighting at the identified campuses is original to the building and needs replacement with LED style lighting. The old fixtures are rusting because of the environment and require frequent servicing to maintain the proper lighting levels.

The pool plaster and deck surface at KHS has worn thin and become slippery to the students and staff using the pool. Both surfaces have exceeded their life cycle for replacement.

The starting blocks for the identified campuses are also original to the building and have exceeded their life cycle for replacement. These pieces of equipment will be replaced with newer technology used in other District facilities.
