

# General Project Information

## **Police Software & Computers**

Project: Police Department Items

Project Description: Record management software and computers for vehicles.

Project Priority: 1

Background & Justification: Record management software to allow the Katy ISD Police Department to communicate directly with Harris County and other agencies. This software will provide additional resources to maintain student and District safety.

The computers used in the police vehicles are not part of the normal computer retrofit cycle due to their specific requirements. This item would cover fifty three (53) hardened laptops, made specifically for police vehicles, to ensure that our officers are working with efficient equipment.
